

Name: \_\_\_\_\_ Period: \_\_\_\_\_ Date: \_\_\_\_\_

| #  | Answer and work          | Instructional evidence                                      |
|----|--------------------------|-------------------------------------------------------------|
| 1  | 0.407, 0.47, 0.704, 0.74 | Compare aligned thousandths.                                |
| 2  | 0.63                     | The total span is 0.10, so each interval is 0.01.           |
| 3  | 7.078                    | Estimate about 7.1; align decimal points.                   |
| 4  | 9.33                     | Estimate about 9; $12.80 - 3.47 = 9.33$ .                   |
| 5  | 0.72                     | The product is less than 1.8 because 0.4 is less than 1.    |
| 6  | 3.12                     | $2.4(1 + 0.3) = 2.4 + 0.72$ .                               |
| 7  | 609                      | Zero holds the tens place; $609 \times 4 = 2,436$ .         |
| 8  | 24                       | $7.2 \div 0.3 = 72 \div 3 = 24$ .                           |
| 9  | 5.086                    | Align decimal points: $4.700 + 0.386$ .                     |
| 10 | 21 m <sup>2</sup>        | $8.4 \times 2.5 = 21$ ; area uses square meters.            |
| 11 | 9 buses                  | $193 \div 24 = 8 \text{ R}1$ , so one more bus is required. |
| 12 | 8                        | Both numbers are multiplied by 10, preserving the quotient. |

**Optional challenge answer**

Small:  $\$3.25 \div 12.5 = \$0.26$  per ounce. Large:  $\$5.76 \div 28.8 = \$0.20$  per ounce. The 28.8-ounce snack is the better buy.
