## SCORING

**Core score: 20 points. Items 1-8 are 1 point each. Items 9-12 are 3 points each. Record the optional challenge separately.**

| # | Answer and work           | Instructional evidence                                                    |
|---|---------------------------|---------------------------------------------------------------------------|
| 1 | 0.075, 0.507, 0.57, 0.705 | 1 point. Decimal comparison and ordering; 6.NS.7 / prerequisite 5.NBT.3b. |
| 2 | 1.26                      | 1 point. Scale is 0.02 per interval; number-line reasoning.               |
| 3 | 5.086                     | 1 point. Add decimals by place value; 6.NS.3.                             |
| 4 | 4.715                     | 1 point. Subtract decimals by place value; 6.NS.3.                        |
| 5 | 3.12                      | 1 point. Decimal multiplication; 6.NS.3.                                  |
| 6 | 0.28                      | 1 point. Magnitude and decimal multiplication; 6.NS.3.                    |
| 7 | 1,032                     | 1 point. Multi-digit whole-number division with zero placeholder; 6.NS.2. |
| 8 | 24.5                      | 1 point. Decimal division using an equivalent whole divisor; 6.NS.3.      |

| #  | Answer and work                                                        | Instructional evidence                                                     |
|----|------------------------------------------------------------------------|----------------------------------------------------------------------------|
| 9  | Align decimal points: $4.700 + 0.386 = 5.086$ .                        | 3 points. Error analysis, place value, and correction; 6.NS.3.             |
| 10 | Estimate about $18 \text{ m}^2$ ; exact area $18 \text{ m}^2$ .        | 3 points. Decimal multiplication in an area context; 6.NS.3 and 6.G.1.     |
| 11 | 7 buses. $158 \div 24 = 6 \text{ R}14$ , and one more bus is required. | 3 points. Whole-number division and remainder interpretation; 6.NS.2.      |
| 12 | Yes. Both numbers are multiplied by 10; both quotients are 32.         | 3 points. Equivalent quotients and decimal division justification; 6.NS.3. |

**Items 9-12 rubric**

3 points: correct setup or representation, accurate computation, and a clear explanation with units or contextual interpretation. 2 points: one element is incomplete. 1 point: meaningful progress. 0 points: no relevant evidence.

**Optional challenge**

Answers vary. Each expression must equal 24, scale dividend and divisor by the same factor, and include a valid multiplication check. Record challenge points separately from the 20-point core score.
