

Name: _____ Period: _____ Date: _____

HOW TO USE

Use this page to remember the structure. It supports your thinking; it does not replace showing your work.

COMPARE AND ORDER

Align place values. Add placeholder zeros when useful. Compare from left to right. On a number line, find the endpoints and one interval before placing a point.

ADD AND SUBTRACT

Estimate. Align decimal points and like places. Add placeholder zeros. Regroup by place value. Compute. Check with the inverse operation and the estimate.

MULTIPLY

Estimate the product's size. Use an area model or partial products. Multiply. Place the decimal using place value and magnitude. Check whether the result fits the estimate.

WHOLE-NUMBER DIVISION

Estimate. Place each quotient digit by its value. Divide, multiply, subtract, rename and combine, then repeat. Verify: divisor $\times$ quotient + remainder = dividend.

DECIMAL DIVISOR

Make the divisor whole by multiplying both the divisor and dividend by the same power of 10. Write the equivalent expression. Divide. Verify with the original divisor.

REMAINDERS

A remainder must be smaller than the divisor. The question decides whether to report it, convert it, discard it, or round up.

TASK ATTACK

1 Underline important information	2 Cross out what does not help	3 Circle what is asked	4 Rewrite the useful facts	5 List possible strategies	6 Try one visible first step	7 Check the result in context
-----------------------------------	--------------------------------	------------------------	----------------------------	----------------------------	------------------------------	-------------------------------

A strong check answers two questions: Is the computation correct? Does the answer make sense here?
