

Name: _____ Period: _____ Date: _____

KEY USE

Use the first incorrect line to choose the next support. Every student completes all four required items; the challenge is separate.

#	Answer and work	Instructional evidence
1	288. One useful decomposition is $200 + 80 + 8$. Check: $288 \times 3 = 864$.	The partial quotients must connect to the hundreds, tens, and ones digits.
2	224. Partial quotients $200 + 20 + 4$. Check: $224 \times 6 = 1,344$.	Listen for quotient-digit value, not only digit names.
3	252. Check: $252 \times 3 = 756$.	First incorrect line identifies whether the need is facts, place value, or subtraction.
4	The 2 represents 200. Check: $212 \times 4 = 848$.	The student should name the hundreds place and connect it to $200 \div 4$.

Challenge

689. Partial quotients could be $600 + 80 + 9$. Check: $689 \times 24 = 16,536$. Accept different valid partial quotients and a reasoned comparison.
